

## Installing MongoDB, Connecting to Flask in VSCode Guide:

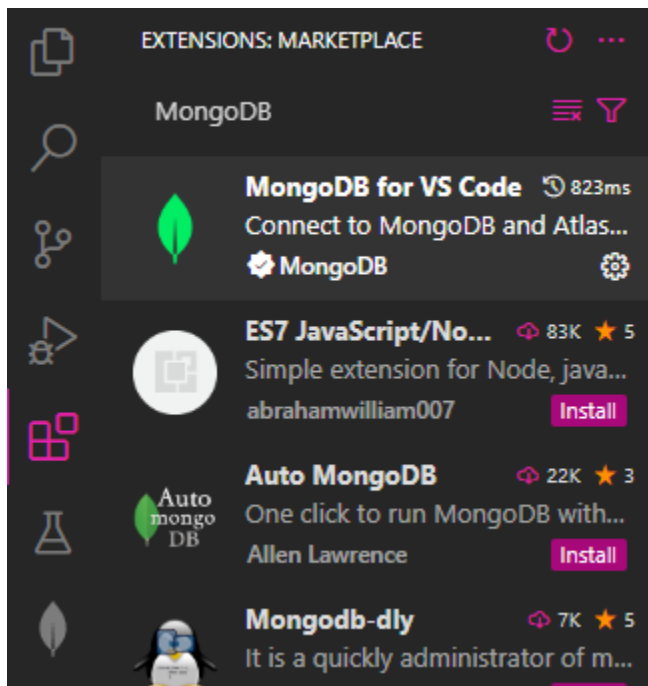

1. Go to extensions on VScode

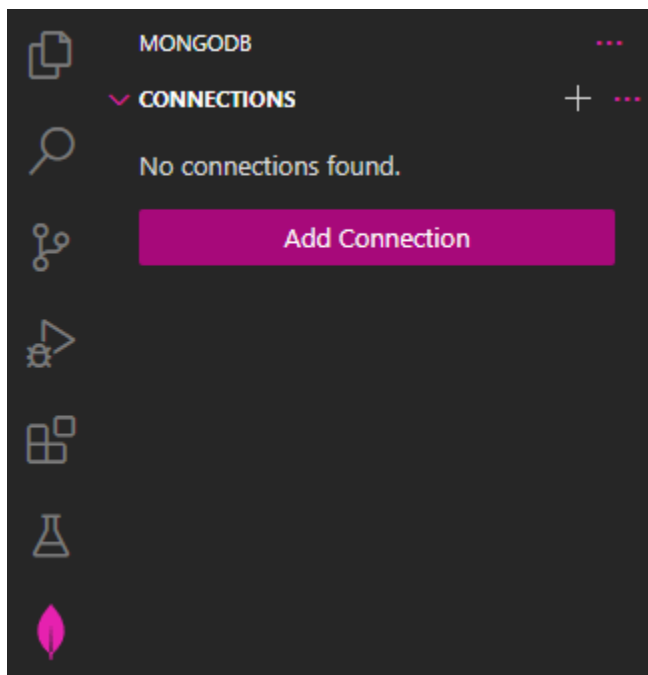

2. Search for MongoDB for VSCode and click on install

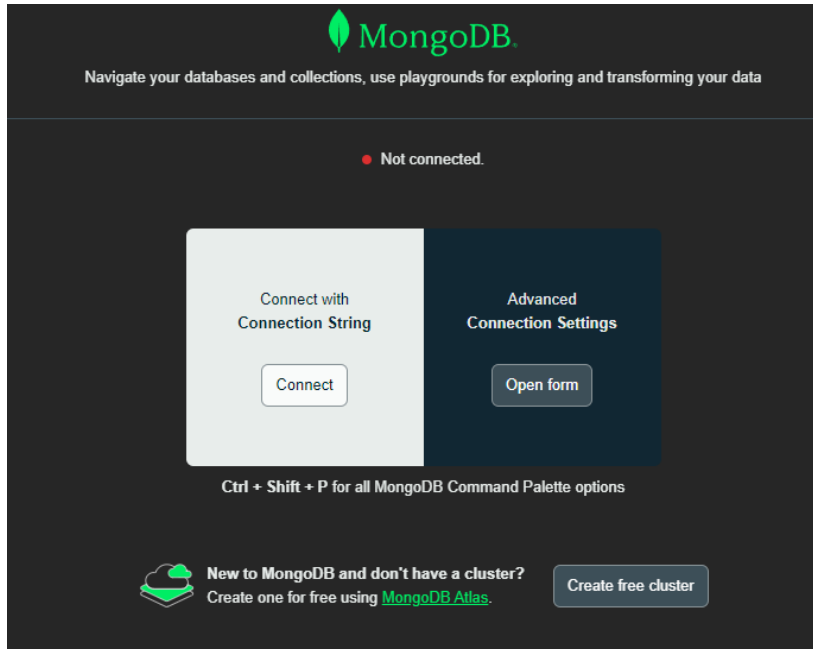

3. Once installed, a leaf icon will appear:

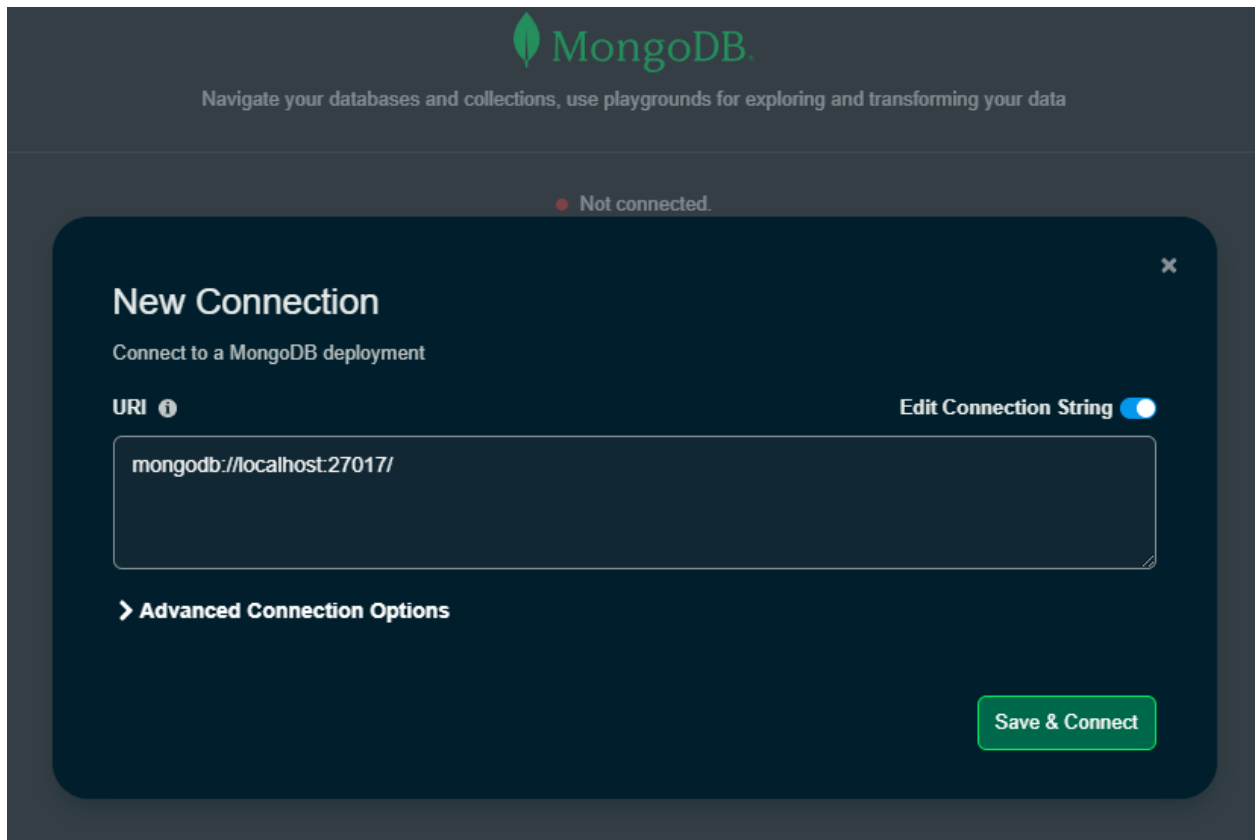

4. Click on the leaf icon, then click add connections

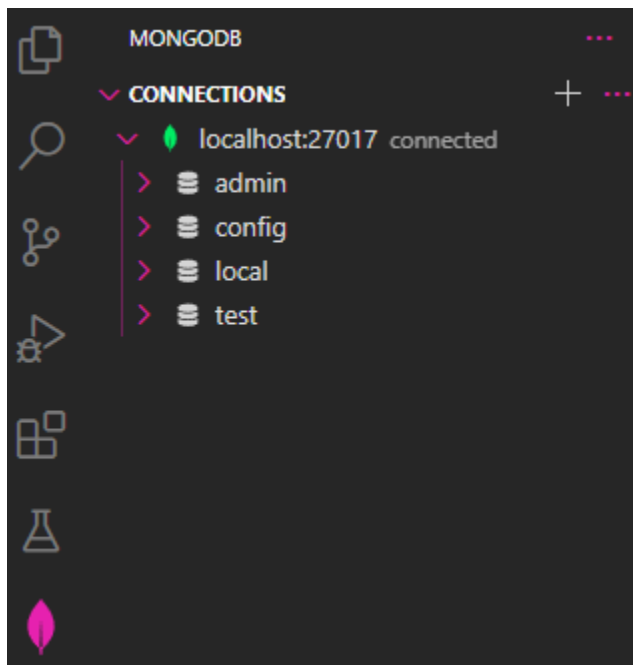

- Click on “Open forms” under Advanced Connection Settings

- Leave the URI as the default option and click on “Save and Connect”

- Once connected, databases will appear:

8. Right click “localhost:27017” to refresh the databases, add new databases and collections etc.
